Course Outline 20743B

Module 1: Installing and configuring Windows Server 2016
This module explains how to install and perform post-installation configuration of Windows Server 2016 servers.
Lessons
- Introducing Windows Server 2016
- Installing Windows Server 2016
- Configuring Windows Server 2016
- Preparing for upgrades and migrations
- Migrating server roles and workloads
- Windows Server activation models

Lab : Installing and configuring Nano Server
- Installing Nano Server
- Completing post-installation tasks on Nano Server

After completing this course, students will be able to:
- Explain Windows Server 2016.
- Install Windows Server 2016.
- Configure Windows Server 2016.
- Prepare for upgrades and migrations.
- Migrate server roles and workloads.
- Describe the Windows Server activation models.

Module 2: Overview of storage in Windows Server 2016
This module explains how to configure storage in Windows Server 2016.
Lessons
- Overview of storage in Windows Server 2016
- Implementing Data Deduplication
- Configuring iSCSI storage
- Configuring the Storage Spaces feature in Windows Server 2016

Lab : Implementing and managing storage
- Implementing File Server Resource Manager (FSRM)
- Configuring iSCSI storage

Lab : Implementing and managing advanced storage solutions
- Configuring redundant storage spaces
- Implementing the Storage Spaces Direct feature

After completing this module, students will be able to:
- Explain storage in Windows Server 2016.
- Implement Data Deduplication.
- Configure iSCSI storage.
- Configure the Storage Spaces feature in Windows Server 2016

Module 3: Implementing directory services
This module explains how to implement the Directory Services feature.
Lessons
- Deploying Active Directory domain controllers
- Implementing service accounts

- Azure AD

Lab : Implementing and Managing AD DS
- Cloning a domain controller
- Implementing service accounts

After completing this module, students will be able to:
- Deploy AD DS domain controllers.
- Implement service accounts.
- Explain Azure AD.

Module 4: Implementing AD FS
This module explains how to implement an AD FS deployment
.**Lessons**
- Overview of AD FS
- Deploying AD FS
- Implementing AD FS for a single organization
- Implementing Web Application Proxy
- Implementing SSO with Microsoft Online Services

Lab : Implementing AD FS
- Installing and configuring AD FS
- Configuring an internal application for AD FS

Lab : Implementing Web Application Proxy
- Implementing Web Application Proxy

After completing this module, students will be able to:
- Describe of AD FS.
- Deploy AD FS.
- Implement AD FS for a single organization.
- Implement Web Application Proxy.
- Implement SSO with Microsoft Online Services.

Module 5: Implementing network services
This module explains how to configure advanced features for Dynamic Host Configuration
Protocol (DHCP) and configure IP Address Management (IPAM).
Lessons
- Overview of networking enhancements
- Implementing IPAM
- Managing IP address spaces with IPAM

Lab : Implementing network services
- Configuring DNS policies
- Configuring DHCP failover
- Configuring IPAM

After completing this module, students will be able to:
- Describe networking enhancements.
- Implement IP address management.
- Manage IP address spaces with IPAM.
-

Module 6: Implementing Hyper-V
This module explains how to install and configure Hyper-V virtual machines.
Lessons
- Configuring the Hyper-V role in Windows Server 2016

- Configuring Hyper-V storage
- Configuring Hyper-V networking
- Configuring Hyper-V virtual machines

Lab : Implementing server virtualization with Hyper-V
- Installing the Hyper-V server role
- Configuring virtual networking
- Creating and configuring a virtual machine

After completing this module, students will be able to:
- Configure the Hyper-V role in Windows Server 2016.
- Configure Hyper-V storage.
- Configure Hyper-V networking.
- Configure Hyper-V virtual machines.

Module 7: Configuring advanced networking features
This module explains how to implement an advanced networking infrastructure.
Lessons
- Overview of high-performance networking features
- Configuring advanced Hyper-V networking features

Lab : Configuring advanced Hyper-V networking features
- Creating and using Microsoft Hyper-V virtual switches
- Configuring and using the advanced features of a virtual switch

After completing this module, students will be able to:
- Describe high-performance networking features.
- Configure advanced Hyper-V networking features.

Module 8: Implementing Software Defined Networking
This module explains how to implement software-defined networking.
Lessons
- Overview of SDN
- Implementing network virtualization
- Implementing Network Controller

Lab : Deploying Network Controller
- Preparing to deploy Network Controller
- Deploying Network Controller

After completing this module, students will be able to:
- Describe Software Defined Networking.
- Implement network virtualization.
- Implement Network Controller.

Module 9: Implementing remote access
This module explains how to configure connectivity for remote users by using the DirectAccess feature.
Lessons
- Remote access overview
- Implementing DirectAccess
- Implementing VPN

Lab : Implementing DirectAccess
- Configure DirectAccess using the Getting Started Wizard
- Testing DirectAccess

After completing this module, students will be able to:
- Describe common remote-access solutions and technologies.
- Implement DirectAccess.
- Implement VPNs.

Module 10: Deploying and managing Windows and Hyper-V containers
This module provides an overview of Windows Server 2016 containers. Additionally, it explains how to deploy, install, configure, and manage containers in Windows Server 2016.
Lessons
- Overview of containers in Windows Server 2016
- Preparing to deploy containers
- Installing, configuring, and managing containers by using Docker
Lab : Installing and configuring containers
- Installing Docker
After completing this module, students will be able to:
- Explain the purpose of Windows Server and Hyper-V containers.
- Deploy and manage containers.
- Install, configure, and manage containers by using Docker

Module 11: Implementing failover clustering
This module explains how to implement failover clustering to provide high availability for network services and applications.
Lessons
- Overview of failover clustering
- Implementing a failover cluster
- Configuring highly-available applications and services on a failover cluster
- Maintaining a failover cluster
- Implementing a stretch cluster
Lab : Implementing failover clustering
- Configuring iSCSI storage
- Configuring a failover cluster
- Deploying and configuring a highly available file server
- Validating the deployment of a highly available file server
- Configuring CAU on the failover cluster
After completing this module, students will be able to:
- Describe the concept of failover clustering.
- Implement a failover cluster.
- Configure highly-available applications and services on a failover cluster.
- Maintain a failover cluster.
- Implement a stretch-failover cluster.

Module 12: Implementing failover clustering with Windows Server 2016 Hyper-V
This module explains how to deploy and manage Hyper-V virtual machines in a failover cluster.
Lessons
- Overview of the integration of Hyper-V Server 2016 with failover clustering
- Implementing Hyper-V virtual machines on failover clusters
- Implementing Windows Server 2016 Hyper-V virtual machine migration
- Implementing Hyper-V Replica

Lab : Implementing failover clustering with Windows Server 2016 Hyper-V

- The Hyper-V Failover clustering testing environment
- Configuring Hyper-V Replica
- Configuring a failover cluster for Hyper-V
- Configuring a highly available virtual machine

After completing this module, students will be able to:

- Describe how Windows Server 2016 Hyper-V integrates with failover clustering.
- Implement Hyper-V virtual machines on failover clusters.
- Implement Hyper-V virtual machine migration.
- Implement Hyper-V Replica.
